

The final assignments most common mistakes (v. 01-06-2026)

Critical mistakes

1. Weak focus on Uzbekistan context. **This is a key aspect to get a grade higher than Pass!**

- often you write only general phrases like “*the technology is widely used in Uzbekistan in government projects or projects of large companies like Uzum, TBC Bank, Technopark*” – **this is not enough!**
- in the economics section, you must also focus on:
 - market size in Uzbekistan
 - cost and conditions of use for the local market (with references to sources)
- you must provide links to specific projects: articles, company press releases, conference reports. You need at least 3–4 such examples in the whole assignment:
 - 2–3 for the technology description section
 - 2–3 for other sections

2. Topic approval

- the topic must be approved BEFORE you start writing the assignment
- you CAN continue the topic from the MidTerm
- **important: work on a non-approved topic can be rejected simply because of incorrect topic choice!**

Formatting

1. Headings and structure

- do not write Task 1, Task 2 in the table of contents and headings
- use only section names: Introduction, Technology Overview, etc.
- Task 1 = Introduction, no need to create another intro
- in Task 2, do not explicitly write Thesis 1, Argument 1.1 – this was shown only to explain structure

2. Diagrams

- use white or transparent background
- use dark lines and text
- use light colors for blocks
- do NOT use screenshots
- export diagrams to PNG using export options of your software:
 - example: File → Export As → PNG
 - for Miro: ⋮ → Board → Export → Export as Image
- diagrams must be:
 - large, clearly readable
 - in PORTRAIT (vertical) format

3. References / In-text references

- use Harvard style with full URL
- every source must have a proof link in the text
- use round brackets for references

Example of proof link in text:

The game development industry in Uzbekistan is actively growing and attracting new specialists (Gazeta.uz, 2026).
